FE100-25-EM

FlexPro® Series
Product Status: Active

SPECIFICATIONS

Current Peak	**50 A**
Current Continuous	**25 A**
DC Supply Voltage	**18 – 90 VDC**
Network Communication	**EtherCAT**
The **FE100-25-EM** is a FlexPro® series servo drive with IMPACT™ architecture.

The **FE100-25-EM** offers full tuning control of all servo loops and is designed to drive brushed and brushless servo motors, and closed loop stepper motors. The drive accepts a variety of external command signals, or can use the built-in Motion Engine, an internal motion controller used with Sequencing and Indexing commands. Programmable digital and analog I/O are included to enhance interfacing with external controllers and devices.

The **FE100-25-EM** features an EtherCAT® interface for network communication using CANopen over EtherCAT (CoE) and USB connectivity for drive configuration and setup. All drive and motor parameters are stored in non-volatile memory.

IMPACT™ (**I**ntegrated **M**otion **P**latform **A**nd **C**ontrol **T**echnology combines exceptional processing capability and high-current components to create powerful, compact, feature-loaded servo solutions. IMPACT™ is used in all FlexPro® drives and is available in custom products as well.

FEATURES

- CoE – Based on DSP-402 Device Profile for Drives and Motion Control
- Synchronization using Distributed Clocks
- Position Cycle Times down to 100µs
- Four Quadrant Regenerative Operation
- Programmable Gain Settings
- PIDF Velocity Loop
- Compact Size, High Power Density
- On-the-Fly Mode Switching
- On-the-Fly Gain Set Switching
- Dedicated Safe Torque Off (STO) Inputs
- Space Vector Modulation (SVM) Technology

Feedback Supported	• Absolute Encoder ○ BiSS C-Mode • Incremental Encoder • Hall Sensors • Aux Incremental Encoder • Tachometer (±10V)	**Motors Supported**	• Three Phase • Single Phase • Stepper	**Modes of Operation**	• Profile Modes • Cyclic Synchronous Modes • Current • Velocity • Position
Command Sources	• Over the Network • ±10V Analog • Sequencing • Indexing • Jogging • Step & Direction • Encoder Following	**Inputs / Outputs**	• 4 Programmable Digital Inputs • 3 Programmable Digital Outputs • 1 Programmable Analog Input	**Agency Approvals**	• RoHS • UL/CE (Pending) • TUV Rheinland (STO) (Pending)

Notes
1. Applications with a logic supply voltage higher than 30VDC require a minimum external decoupling capacitance of 2.2µF / 60V film or 100µF / 100V aluminum added across LOGIC PWR and LOGIC GND.
2. External capacitance value assumes MLCC capacitors, 200V rating. For hybrid-polymer capacitor types, minimum external capacitance increases to 100µF / 100V.
3. Capable of supplying drive rated peak current for 2 seconds with 2 second foldback to continuous value. Longer times are possible with lower current limits.
4. Continuous Arms value attainable when RMS Charge-Based Limiting is used.
5. Lower inductance is acceptable for bus voltages well below maximum. Use external inductance to meet requirements.
6. EtherCAT® is a registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany.
7. Maximum motor speed for stepper motors is 600 RPM. Consult the hardware installation manual for 2-phase stepper wiring configuration.
8. Additional cooling and/or heatsink may be required to achieve rated performance.

*Mating Connector Kit
Surface mount board connector for P1 and board spacers can be ordered as a kit using *ADVANCED* Motion Controls'
part number **KC-MC1XFE01**.

Safe Torque Off (STO) Inputs
The Safe Torque Off (STO) inputs are dedicated +5VDC sinking single-ended inputs. For applications not using STO functionality, disabling of the STO feature is required for proper drive operation. STO may be disabled by following the STO Disable wiring instructions as given in the hardware installation manual. Consult the hardware installation manual for more information.

HARDWARE INFORMATION

LED Functionality

LINK/ACT IN (P1-51); LINK/ACT OUT (P1-52); STATUS (P1-53);

The *LINK/ACT IN, LINK/ACT OUT,* and *STATUS* pins serve as EtherCAT network indicators. On a standard RJ-45 connector used with EtherCAT network topology, the typical EtherCAT network indicator LED locations are as shown in the below diagrams. **Note that the drive features signals for connection to LEDs on an RJ-45 connector, but the connector itself is not included on the drive. The Development Card assembly FD060-25-EM features a built-in RJ-45 connector with LEDs for this purpose**.

LINK/ACT IN and *LINK/ACT OUT* are used to drive the corresponding LINK IN and LINK OUT LEDs on a typical RJ-45 connector. The STATUS pin is used to drive the Status LED. The ERROR LED is driven by the I²C Data signals (P1-10/12). Consult the hardware installation manual for recommended wiring connections. The LED Function Protocol tables below describe typical LED functionality.

LINK/ACT LEDS	
LED State	**Description**
Green – On	Valid Link - No Activity
Green – Flickering	Valid Link - Network Activity
Off	Invalid Link

STATUS LED	
LED State	**Description**
Green – On	The device is in the state OPERATIONAL
Green – Blinking (2.5Hz – 200ms on and 200ms off)	The device is in the state PRE-OPERATIONAL
Green – Single Flash (200ms flash followed by 1000ms off)	The device is in state SAFE-OPERATIONAL
Green – Flickering (10Hz – 50ms on and 50ms off)	The device is booting and has not yet entered the INIT state, or The device is in state BOOTSTRAP, or Firmware download operation in progress
Off	The device is in state INIT

ERROR LED		
LED State	**Description**	**Example**
Red – On	A PDI Watchdog timeout has occurred.	Application controller is not responding anymore.
Red – Blinking (2.5Hz – 200ms on and 200ms off)	General Configuration Error.	State change commanded by master is impossible due to register or object settings.
Red – Flickering (10Hz – 50ms on and 50ms off)	Booting Error was detected. INIT state reached, but parameter "Change" in the AL status register is set to 0x01:change/error	Checksum Error in Flash Memory.
Red – Single Flash (200ms flash followed by 1000ms off)	The slave device application has changed the EtherCAT state autonomously: Parameter "Change" in the AL status register is set to 0x01:change/error.	Synchronization error; device enters SAFE-OPERATIONAL automatically
Red – Double Flash (Two 200ms flashes separated by 200ms off, followed by 1000ms off)	An application Watchdog timeout has occurred.	Sync Manager Watchdog timeout.
