Current Continuous	**1 A**
DC Supply Voltage	**10 – 55 VDC**
Network Communication	**EtherCAT**
The **FM060-1-EM** is a single-axis servo drive and integration board assembly for a FE060-1-EM FlexPro® series servo drive with IMPACT™ architecture. Connections to the controller, motor, power, and feedback are simplified through the standard connectors featured on the board.

The **FM060-1-EM** offers full tuning control of all servo loops and is designed to drive brushed and brushless servo motors, and closed loop stepper motors. The drive accepts a variety of external command signals, or can use the built-in Motion Engine, an internal motion controller used with Sequencing and Indexing commands. Programmable digital and analog I/O are included to enhance interfacing with external controllers and devices.

The **FM060-1-EM** utilizes EtherCAT® network communication using CANopen over EtherCAT (CoE) and is configured via USB. All drive and motor parameters are stored in non-volatile memory.

IMPACT™ (**I**ntegrated **M**otion **P**latform **A**nd **C**ontrol **T**echnology) combines exceptional processing capability and high-current components to create powerful, compact, feature-loaded servo solutions. IMPACT™ is used in all FlexPro® drives and is available in custom products as well.

FEATURES

- CoE – Based on DSP-402 Device Profile for Drives and Motion Control
- Synchronization using Distributed Clocks
- Position Cycle Times down to 100μs
- Four Quadrant Regenerative Operation
- Programmable Gain Settings
- PIDF Velocity Loop

- On-the-Fly Mode Switching
- On-the-Fly Gain Set Switching
- Compact Size, High Power Density
- Dedicated Safe Torque Off (STO) Inputs
- Bridge Status, Fault and Network Status LEDs
- Standard Connections for Easy Setup

Feedback Supported	- Absolute Encoder
	  o BiSS C-Mode
	  o EnDat 2.2
	- Incremental Encoder
	- Hall Sensors
	- Tachometer (±10V)
		Motors Supported	- Three Phase
			- Single Phase
			- Stepper
				Modes of Operation	- Profile Modes
					- Cyclic Synchronous Modes
					- Current
					- Velocity
					- Position

Command Sources	- Over the Network - ±10V Analog - Sequencing - Indexing - Jogging - Step & Direction - Encoder Following	**Inputs / Outputs**	- 4 Programmable Digital Inputs - 3 Programmable Digital Outputs - 1 Programmable Analog Input	**Agency Approvals**	- RoHS - UL/cUL - CE Class A (LVD) - CE Class A (EMC) - TUV Rheinland (STO) (Pending)

INFORMATION ON APPROVALS AND COMPLIANCES

US and Canadian safety compliance with UL/IEC 61800-5-1, the industrial standard for adjustable speed electrical power drive systems. UL registered under file number E140173. Note that machine components compliant with UL are considered UL registered as opposed to UL listed as would be the case for commercial products.

Compliant with European EMC Directive 2014/30/EU on Electromagnetic Compatibility (specifically EN 61000-6-4:2007/A1:2011 for Emissions, Class A and EN 61000-6-2:2005 for Immunity, Performance Criteria A). LVD requirements of Directive 2014/35/EU (specifically, EN 60204-1:2019, a Low Voltage Directive to protect users from electrical shock).

The RoHS Directive restricts the use of certain substances including lead, mercury, cadmium, hexavalent chromium and halogenated flame retardants PBB and PBDE in electronic equipment.

Notes
1. Capable of supplying drive rated peak current for 2 seconds with 5 second foldback to continuous value. Longer times are possible with lower current limits.
2. Continuous Arms value attainable when RMS Charge-Based Limiting is used.
3. Applications with a supply voltage higher than 30VDC require a minimum external decoupling capacitance of 470µF / 100V added across HV and POWER GND.
4. Lower inductance is acceptable for bus voltages well below maximum. Use external inductance to meet requirements.
5. EtherCAT® is a registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany.
6. Maximum motor speed for stepper motors is 600 RPM. Consult the hardware installation manual for 2-phase stepper wiring configuration.
7. Additional cooling and/or heatsink may be required to achieve rated performance.

BOARD CONFIGURATION

Status LED Functions

LED	Description
STAT	Indicates drive power bridge status. GREEN when DC bus power is applied and the drive is enabled. RED when the drive is in a fault state.
LOGIC PWR	Indicates that logic power is available to the drive. GREEN when logic power is available.

Communication Status LED Functions

LED	Description	
LINK/ACT IN/OUT	Green – On	Valid Link - No Activity
	Green – Flickering	Valid Link - Network Activity
	Off	Invalid Link
ETHERCAT STATUS	Green – On	The device is in the state OPERATIONAL
	Green – Blinking (2.5Hz – 200ms on and 200ms off)	The device is in the state PRE-OPERATIONAL
	Green – Single Flash (200ms flash followed by 1000ms off)	The device is in state SAFE-OPERATIONAL
	Green – Flickering (10Hz – 50ms on and 50ms off)	The device is booting and has not yet entered the INIT state or The device is in state BOOTSTRAP or Firmware download operation in progress
	Off	The device is in state INIT
ERROR	Red – On	A PDI Watchdog timeout has occurred. Example: Application controller is not responding anymore.
	Red – Blinking (2.5Hz – 200ms on and 200ms off)	General Configuration Error. Example: State change commanded by master is impossible due to register or object settings.
	Red – Flickering (10Hz – 50ms on and 50ms off)	Booting Error was detected. INIT state reached, but parameter "Change" in the AL status register is set to 0x01:change/error Example: Checksum Error in Flash Memory.
	Red – Single Flash (200ms flash followed by 1000ms off)	The slave device application has changed the EtherCAT state autonomously: Parameter "Change" in the AL status register is set to 0x01:change/error. Example: Synchronization error; device enters SAFE-OPERATIONAL automatically
	Red – Double Flash (Two 200ms flashes separated by 200ms off, followed by 1000ms off)	An application Watchdog timeout has occurred. Example: Sync Manager Watchdog timeout.

Address Selection

The drive Station Alias is set via the EtherCAT network or with the setup software. Note that drives on an EtherCAT network will be given an address automatically based on proximity to the host.

Safe Torque Off (STO) Inputs

The Safe Torque Off (STO) inputs are dedicated +5VDC sinking single-ended inputs. For applications not using STO functionality, disabling of the STO feature is required for proper drive operation. STO may be disabled by following the STO Disable wiring instructions as given in the hardware installation manual.

Mating Connector Kit

Mating connector housing and crimp contacts can be ordered as a kit using *ADVANCED* Motion Controls' part number KC-MC1XFM01. This includes mating connector housing and crimp style contacts for the Communication, I/O and Logic, and Feedback connectors. The recommended tool for crimping the contacts is Molex PN: 63819-1500 (not included with the kit). Pre-crimped leads (Molex PN: 797581018) are also available for purchase from many inline component vendors.
