

### FM100-50-EM

FlexPro® Series

**Product Status:** Active

#### **SPECIFICATIONS**

Current Peak
Current Continuous
DC Supply Voltage
Network Communication

100 A
50 A
20 - 90 VDC
EtherCAT

The **FM100-50-EM** is a single-axis servo drive and integration board assembly for a FE100-50-EM FlexPro® series servo drive with IMPACT<sup>TM</sup> architecture. Connections to the controller, motor, power, and feedback are simplified through the standard connectors featured on the board.

The **FM100-50-EM** offers full tuning control of all servo loops and is designed to drive brushed and brushless servo motors, and closed loop stepper motors. The drive accepts a variety of external command signals, or can use the built-in Motion Engine, an internal motion controller used with Sequencing and Indexing commands. Programmable digital and analog I/O are included to enhance interfacing with external controllers and devices.

The **FM100-50-EM** features an EtherCAT® interface for network communication using CANopen over EtherCAT (CoE) and USB connectivity for drive configuration and setup. All drive and motor parameters are stored in non-volatile memory.

IMPACT<sup>TM</sup> (Integrated Motion Platform And Control Technology) combines exceptional processing capability and high-current components to create powerful, compact, feature-loaded servo solutions. IMPACT<sup>TM</sup> is used in all FlexPro® drives and is available in custom products as well.

#### **FEATURES**

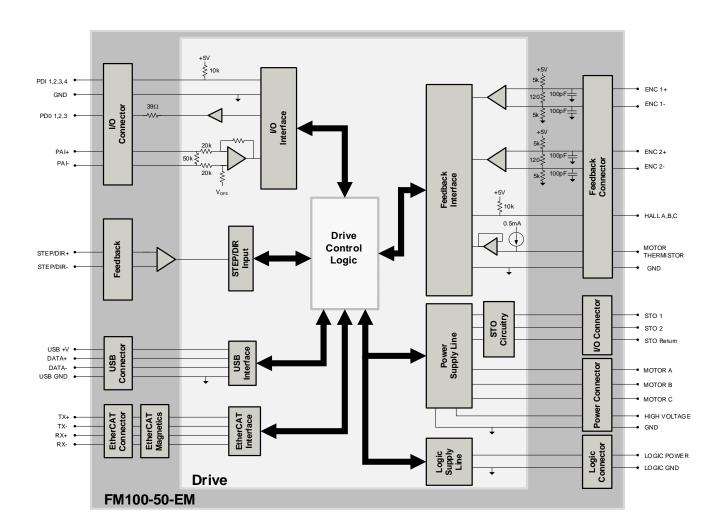

- CoE Based on DSP-402 Device Profile for Drives and Motion Control
- Synchronization using Distributed Clocks
- Position Cycle Times down to 100μs
- Four Quadrant Regenerative Operation
- Programmable Gain Settings
- PIDF Velocity Loop

- On-the-Fly Mode Switching
- On-the-Fly Gain Set Switching
- Dedicated Safe Torque Off (STO) Inputs
- Bridge Status, Fault and Network Status LEDs
- I/O Status LEDs
- Standard Connections for Easy Setup

#### **BLOCK DIAGRAM**

### **INFORMATION ON APPROVALS AND COMPLIANCES**

The RoHS Directive restricts the use of certain substances including lead, mercury, cadmium, hexavalent chromium and halogenated flame retardants PBB and PBDE in electronic equipment.

- 1. Minimum required external capacitance between HV and GROUND is 10µF / 2.5Arms for max rated operation assuming battery supply with <3ft lead length. Required external
- capacitance may be larger depending on specific system variables, capacitor types, motor current ripple, etc.

  2. Capable of supplying drive rated peak current for 2 seconds with 10 second foldback to continuous value. Longer times are possible with lower current limits.

  3. Continuous A<sub>rms</sub> value attainable when RMS Charge-Based Limiting is used.
- 4. Lower inductance is acceptable for bus voltages well below maximum. Use external inductance to meet requirements.
- EtherCAT® is a registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany.

  Maximum motor speed for stepper motors is 600 RPM. Consult the hardware installation manual for 2-phase stepper wiring configuration.

  Additional cooling and/or heatsink may be required to achieve rated performance.

#### **BOARD CONFIGURATION**

#### **Status LED Functions**

| LED       | Description   |
|-----------|---|
| STAT      | Indicates drive power bridge status. GREEN when DC bus power is applied and the drive is enabled. RED when the drive is in a fault state. |
| LOGIC PWR | Indicates that +5V logic power is available to the drive. GREEN when +5V logic power is available.  |

#### **Communication Status LED Functions**

| LED             | Des   | cription  |
|-----------------|---|---|
|                 | Green – On  | Valid Link - No Activity  |
| LINK/ACT IN/OUT | Green – Flickering  | Valid Link - Network Activity   |
|                 | Off   | Invalid Link  |
|                 | Green – On  | The device is in the state OPERATIONAL  |
|                 | Green – Blinking (2.5Hz – 200ms on and 200ms off)             | The device is in the state PRE-OPERATIONAL  |
|                 | Green – Single Flash (200ms flash followed by 1000ms off)     | The device is in state SAFE-OPERATIONAL   |
|                 |   | The device is booting and has not yet entered the INIT state  |
| ETHERCAT STATUS |   | or  |
|                 | Green – Flickering (10Hz – 50ms on and 50ms off)              | The device is in state BOOTSTRAP  |
|                 |   | or  |
|                 |   | Firmware download operation in progress   |
|                 | Off   | The device is in state INIT   |
|                 | Red – On  | A PDI Watchdog timeout has occurred.  |
|                 | Nod OII   | Example: Application controller is not responding anymore.  |
|                 |   | General Configuration Error.  |
|                 | Red – Blinking (2.5Hz – 200ms on and 200ms off)               | Example: State change commanded by master is impossible due   |
|                 |   | to register or object settings.   |
|                 | P. J. Fi'd a 'co (1011 - 50 co co d 50 co eff)                | Booting Error was detected. INIT state reached, but parameter   |
| ERROR           | Red – Flickering (10Hz – 50ms on and 50ms off)                | "Change" in the AL status register is set to 0x01:change/error  |
| ERROR           |   | Example: Checksum Error in Flash Memory.  The slave device application has changed the EtherCAT state |
|                 |   | autonomously: Parameter "Change" in the AL status register is se                                      |
|                 | Red – Single Flash (200ms flash followed by 1000ms off)       | to 0x01:change/error.   |
|                 | Rea – single hash (2001)s hash tollowed by 100011s on)        | Example: Synchronization error; device enters SAFE-OPERATIONA   |
|                 |   | automatically   |
|                 | Red – Double Flash (Two 200ms flashes separated by 200ms off, | An application Watchdog timeout has occurred.   |
|                 | followed by 1000ms off)                                       | Example: Sync Manager Watchdog timeout.   |

#### **Address Selection**

The drive Station Alias is set via the EtherCAT network or with the setup software. Note that drives on an EtherCAT network will be given an address automatically based on proximity to the host.

#### Safe Torque Off (STO) Inputs

The Safe Torque Off (STO) inputs are dedicated +5VDC sinking single-ended inputs. For applications not using STO functionality, disabling of the STO feature is required for proper drive operation. STO may be disabled by following the STO Disable wiring instructions as given in the hardware installation manual.

#### **Mating Connector Kit**

Mating connector housing and crimp contacts can be ordered as a kit using ADVANCED Motion Controls' part number KC-MC1XFM01. This includes mating connector housing and crimp style contacts for the Communication, I/O and Logic, and Feedback connectors. The recommended tool for crimping the contacts is Molex PN: 63819-1500 (not included with the kit).

ADVANCED Motion Controls also has the capability to promptly develop and deliver specified products for OEMs with volume requests. Our Applications and Engineering Departments will work closely with your design team through all stages of development in order to provide the best servo drive solution for your system. Equipped with on-site manufacturing for quick-turn customs capabilities, ADVANCED Motion Controls utilizes our years of engineering and manufacturing expertise to decrease your costs and time-to-market while increasing system quality and reliability.

#### **Examples of Customized Products**

- Optimized Footprint
- Private Label Software
- ▲ OEM Specified Connectors
- ▲ No Outer Case
- ▲ Increased Current Resolution
- ▲ Increased Temperature Range
- Custom Control Interface
- ✓ Integrated System I/O

- Tailored Project File
- ▲ Silkscreen Branding
- ▲ Optimized Base Plate
- ▲ Increased Current Limits
- ▲ Increased Voltage Range
- ▲ Conformal Coating
- ▲ Multi-Axis Configurations
- Reduced Profile Size and Weight

Feel free to contact us for further information and details!

#### **Available Accessories**

ADVANCED Motion Controls offers a variety of accessories designed to facilitate drive integration into a servo system. Visit <a href="https://www.a-m-c.com">www.a-m-c.com</a> to see which accessories will assist with your application design and implementation.
